Shareef Syed

PLATFORM & SOLUTIONS ENGINEER | AI AND ENTERPRISE INTEGRATION

shareefbasha53@gmail.com | linkedin.com/in/shareefsyed | shareefsyeds.github.io | Hyderabad, India

PROFESSIONAL SUMMARY

Platform and solutions engineer with 11+ years across databases, cloud infrastructure and full-stack development. At Signant Health, a clinical-trial technology company, I build and run the internal platform that **200+ employees** use for access requests, enterprise integrations and workflow automation, with generative AI features in pilot. Earlier I managed client database operations at two service firms. Today I take requirements directly from business teams and build them through to production. Looking for forward deployed and solutions engineering roles.

WORK EXPERIENCE

Signant Health

Jan 2022 - Present

Senior Cloud Operations Engineer

Clinical-trial technology company. 2022 to 2023 in cloud operations and database administration, then building the internal platform
Hyderabad, India

- Built and run Signant Health's internal enterprise platform, used by **200+ employees** in finance, supply chain, clinical operations and IT. Business teams are my customers: I take their requirements directly, build the solution and support it in production
- Tools I built are used by clinical-operations teams to deploy and support **client clinical-trial environments** (deployment and access workflows across six environments in test, UAT and production)
- Delivered **120 documented automations** across 17 modules, saving about **40 hours a week**, including one-step Azure AD access after approval and a 20-step application deployment run as one flow
- Designed the AWS infrastructure in Terraform and moved production from a single VM to Amazon EKS (Karpenter, Aurora Serverless v2, ElastiCache Valkey, keyless GitHub OIDC deploys)
- Traced **91%** of an AWS account's CloudWatch log-ingestion spend to one DEBUG-level Lambda, a **~$3K/month** fix, and proposed a self-hosted log stack projected to save **~$47.9K a year**

Autodesk

Jan 2020 - Jan 2022

Cloud Infrastructure Engineer

Bengaluru, India

- Migrated self-managed databases to Amazon RDS with AWS DMS, ran RDS migrations across accounts and regions, and moved DynamoDB tables across regions with AWS Data Pipeline
- Built new AWS accounts (VPC, subnets, security groups) with CloudFormation, managed EC2 fleets, and supported Oracle GoldenGate replication from on-prem to cloud

NTT DATA GDS

May 2019 - Nov 2019

Senior Oracle Database Administrator

- Managed client database operations at a service-based firm. Oracle DBA as primary role (RAC administration, patching, upgrades, tuning in 24x7 production), plus GoldenGate replication (Oracle to SQL Server, on-prem to cloud) and SQL Server administration

Flytxt Mobile Solutions

Aug 2017 - Apr 2019

Oracle Database Administrator

- Administered Oracle RAC and single-instance databases (patching, upgrades, ASM, RMAN, Data Pump), built Data Guard standbys for disaster recovery, and tuned performance with AWR, ASH and execution plans

Datavail Infotech

Apr 2015 - Aug 2017

Oracle Database Administrator

- Managed database operations for client companies at a service-based firm: Oracle 10g-12c installation, patching, RMAN backup and recovery, cloning, Data Pump refreshes and Data Guard standby support

SELECTED PROJECTS AT SIGNANT HEALTH

Internal enterprise platform Live

Entra ID access management, integrations, notifications and clinical-trial operations tools for 200+ employees. Django, React, TypeScript, Celery, PostgreSQL, Tauri, EKS

Workflow orchestration engine Live

Visual DAG builder with **50 step types**, connecting SQL, Snowflake, NetSuite, Certinia, ServiceNow, Jira, Box, S3 and SFTP, with Microsoft Teams approvals, SLA alerts and version history

AI document assistant and Teams bot Pilot

Retrieval-augmented (RAG) answers over internal documents, also inside Microsoft Teams. In a limited pilot with selected users

AWS Bedrock, pgvector, LlamaIndex

MCP gateway and command-line tool Live

250+ tools for AI assistants: generated from the platform's API endpoints, plus hand-curated specialised tools for common tasks. The CLI builds its commands from the gateway at runtime, so a new endpoint needs no CLI release

Observability platform and credential vault Live

Metrics, logs, alerting and runbooks. Secrets with KMS envelope encryption, rotation and Azure AD directory sync

Reusable app template and shared packages In use

New internal apps start with Entra ID SSO (JWT, API keys, RBAC), audit log, 13 integration adapters, AWS connections with credential rotation, and ECS or EKS deployment. Next on it: a study status reporting app replacing a UiPath bot (in development)

AI software-engineering agent team In development

Jira requests become AI-written plans a person approves in Microsoft Teams, then draft pull requests a person reviews and merges. Model fallback, an independent AI reviewer and sandboxed test runs

Claude Code, Codex, AWS Bedrock, GitHub Actions

Consultant invoicing app Live

Built on the template for **100+ users**, replacing a Power Apps app: NetSuite payment status, multi-step approvals and GL coding

Contractor timesheet app Live

Weekly hours and manager approval for **~30** UK and Austria warehouse contractors and managers, with real-time RDS-to-Snowflake sync feeding Certinia. Replaced a weekly n8n batch

React, Fastify, ECS Fargate, Terraform

EDUCATION

B.Tech, Electrical and Electronics Engineering GATES Institute of Technology, Gooty (JNTU Anantapur) 2013

CERTIFICATIONS

AWS Certified Solutions Architect - Associate Amazon Web Services

AWARDS & HONORS

Core Contributor, every year Signant Health

Exceptional Performance Award, twice Autodesk

SKILLS

AI: Generative AI, LLM applications, RAG, AI agents, AWS Bedrock, pgvector, LlamaIndex, MCP, Claude Code, Codex

Programming: Python, Django, Celery, React, TypeScript, Node.js, SQL, PL/SQL, Bash, REST APIs, webhooks, Git

Integrations: NetSuite, Certinia, Snowflake, ServiceNow, Jira, Confluence, Box, Microsoft Teams, Entra ID SSO, LDAP

Cloud: AWS (EKS, ECS Fargate, RDS, Aurora, DMS, Lambda, S3, CloudFormation), Azure (Entra ID, Bot Service, Functions)

Infrastructure and DevOps: Terraform, Terragrunt, Kubernetes, Karpenter, GitHub Actions, ArgoCD, Prometheus, Grafana, OpenTelemetry

Databases: Oracle (RAC, Data Guard, RMAN, GoldenGate), SQL Server (Always On), PostgreSQL, Snowflake, DynamoDB, Redis
